2 - Product Importing

1.
Only display vendors where the Product Importing API is turned on.
Reply: This has been implemented. Please check in QA Deployment.
Remarks: showing and importing products of vendors which has enabled
has_working_product_api

2.
We need to test with full data.

Re-Reply:
I thought this was already done, it was part of the original spec.
That field is now used to manually set active/inactive for a product.

3.
Will the "Fetching Data" message update,
if the product list fails to load or times out?

Re-Reply:
This would be better if there was a live connection to the php script,
so we would know if the process ever did break.

4.
No data is loading.

Reply: We deleted the inactive products from our database and imported the data again.
Note that only the vendors landau, strategic partners, SanMar, White Swan, Barco Uniforms
and Alpha Border are showing, this is because we deactivated the working Product API fro
other vendors because coding for these vendors hasn't been done.

3 - Product Updating

1.
Reply: This has been implemented. Please check in QA Deployment.

2,3 from Product Importing

4.
The display of the Discontinued Products buttons is okay,
but we would still like to be able to review the individualized list.

Reply: Done. Please check in QA Deployment.

5.
We're still getting many false discontinued products.
So we definitely need to figure out the issue with the data.
I will review and give examples.

Reply: We discussed about this issue and found out some reasons which may be causing this issue.

      a. maybe there are manually inserted data for some products,
      b. some color is not found due to insufficient color_cdoe data in our database
      c. upc/sku code or sizes is missing for some products.

Please give us your thoughts on them.

Is it possible that the issue is not with the imported data,
but with our existing data being incorrect?

One product (CK002) lists a new color (red),
but items of that color are also listed as items to be deleted.

Reply: previously we have imported products with matching color name (RED)in our database and color_id is saved in our database, but now, we imported product having both color name and color code and then compared color_code with color_code in our database, which fetched another color (Red with differed id)

4 – Product Status
This is working.
But the product is still listed in the store product list.

Replay: Will update after cronjob.

Verify that this will be updated with the nightly cron job.
APPROVED (if this is the case)

5 – Vendor API Settings

1.
This still isn't set correctly.

For example:

Vendor Wov-In has Product API turned on but has no data.
And we do not have their product API set up.

Vendor CID also has Product API turned on but has no data.

Vendor SanMar has both API's turned on, but only includes data for the Inventory API.
Data for both API's should be set.

Reply: While importing there were issue in SanMar and Alpha Border. We are looking into this.

There are several more examples,
please verify that all settings for every vendor are accurate.

Re-Reply:
Then why are the API's set to active for the other brands,
even when they are not active?

Reply: We have deactivated the API's for the other brands.

There needs to be a direct connection between the data input here,
and the data we receive from that vendor.

Also, I just remembered that the file path and file name
were supposed to be added to the FTP settings.

Also, if the vendor uses the same info for both API's,
the same data should be input in both sections.

7 - Product Item Pricing

This is completed.
APPROVED

8 - Product Colors

1.
There are still multiple versions of the same color for the same brand.
Only one copy of   brand/color_name/color_code   combo should exist.

Reply: We are looking into this issue.

2.
I edited the Color Name of a color,
but the color is still displayed incorrectly on the product.
The color is SafetyYellow (Safty Yellow) for brand : Ash City - Core 365The product is
78181.
I used this product to see if the color would appear
in the updates list after changing the color name.

Reply/Query: Query for color is cached for faster loading , we have reduced the maximum
query caching time for color to 5 min , now it will show changes in color after 5 minutes.
Should we completely remove this caching query?

11 - Lengths
1.
The length order is corrected.
But now the page loads really slowly.
The content loads, but you can't select a color or size.
krypton.dc.qa.yurstore.net/cherokee/1066

Re-Reply:
Yes, the content loads eventually.
But, compared to the same page on the live site, it's much slower.
And it takes about ten seconds longer for the color and size data to load.
And you can't select a size or color during this extra load time.

Compare the load times to this page for reference :
https://medicalstaff.mpgus.yurstore.net/cherokee/1066

Reply: Yes, now the price for all the variants has to be loaded and in most cases there are many combinations of the variants, this is most probably why the load time has increased. What are your thoughts on this?

2.
The button to change the sort order of the links no longer works correctly.
admin.qa.yurstore.net/products/sizes

Re-Reply:
That is what I meant by Not Working.
Compare to the live site :
https://admin.yurstore.net/products/sizes

Reply: Sorry for the misunderstanding. We have fixed this issue, please verify them in the QA deployment.
